

An Authorised Representative within the meaning of the European Directive 2004/22/EC may act on behalf of Kamstrup b.v. for the tasks concerning Kamstrup gas volume conversion device UNIGAS 300, specified as stated below.

The Authorised Representative is authorised to break the manufacturer's seal in order to change the following settings:

- Gas composition
- Switch to enable remote setting of gas composition
- Counter values
- Pulse values
- Inputs (LF, HF, encoder)

The Authorised Representative is authorised to seal the device with the manufacturer's seal after changing the settings.

These tasks shall be executed prior to delivering the device to the customer.

The Authorised Representative is obliged to follow the relevant procedures and guidelines from Kamstrup and the Authorised Representative is under the supervision of Kamstrup with respect to the above specified tasks.

Kamstrup has performed a metrological test according to MID. As a result of that, in principle it is not necessary to check the accuracy of the device by performing a field test at start up. In case of doubt or in accordance to local laws it may be necessary to perform a field test.

After a proper installation (see the manual for more detailed information) of UNIGAS 300, via the software UNITOOL the above settings can be changed. As mentioned, it is necessary to break the manufacturer's seal. Once when the changes have been made, and it has been confirmed that the device works correctly (wait for pulses coming from the gas meter, or generate some pulses) the representative places a new seal.

Acting in violation of the content of the Letter of Authority or incompetence will lead to withdrawal of this Letter of Authority.

Kamstrup b.v.
